

DRILLING

Specialist personnel for safe, efficient drilling operations

Drilling operations require personnel who can perform within safety-critical environments where rig discipline, well control and operational consistency are fundamental. From supervisory leadership and engineering support to core drilling positions on board, these functions are central to maintaining safe execution, technical control and continuity across offshore drilling activity.

Roles We Provide

Roustabout
Floorhand / Roughneck
Derrickman
Assistant Driller
Driller
Toolpusher
OIM
Rig Electrician
Rig Mechanic
Electronic Technician
Motorman
Radio Operator
Safety Officer
DPO / SDPO
Materials Coordinator

AGR advantage

AGR supports drilling requirements with personnel selected for their fit with offshore rig environments, structured operating procedures and the demands of live drilling operations. Our approach is centred on identifying professionals who can integrate effectively into established rig teams and contribute to performance, control and reliability offshore.

Rig operations

Personnel aligned to offshore drilling units where control, uptime and execution discipline are central.

Supervisory depth

Coverage across leadership, engineering and crew-level functions essential to offshore drilling continuity.

Well control

Support for roles operating within safety-critical drilling environments shaped by procedural rigour and technical accountability.

Operational reliability

Individuals selected to reinforce safe execution and stable performance across active rig environments.

Other Sectors We Serve
