

EPC

Discipline and alignment across delivery stages

EPC environments depend on coordination across engineering, procurement, construction and commissioning, where technical alignment and execution control shape delivery performance. These roles support structured progression across multiple stages of delivery and reinforce continuity between planning, execution and final completion.

Roles We Provide

Project Directors
Project Managers
Engineering Managers
Project Engineering Managers
Construction Managers
Site Managers
Project Engineers
Lead Discipline Engineers
Procurement Managers
Project Controls Engineers
Planning Engineers
Contracts Engineers
Quantity Surveyors
HSE Managers
QA QC Managers

AGR advantage

AGR supports EPC activity with personnel suited to structured delivery environments where planning, coordination and execution discipline are essential. Our approach focuses on professionals who can contribute across staged delivery settings while supporting technical continuity and operational alignment.

Engineering support

Technical contribution across defined design, planning and execution stages.

Construction readiness

Aligned input across site execution phases and delivery preparation.

Procurement coordination

Support across package interfaces, supply activity and structured delivery controls.

Commissioning input

Continuity through final-stage execution, completion activity and handover support.

Other Sectors We Serve
