

FPSO

Operational continuity across floating production assets

FPSO environments require stable support across production, maintenance, marine activity and asset integrity, where uptime and technical discipline remain constant priorities. These roles contribute to the continuity of live offshore production settings where multiple functions must operate in parallel without disruption.

Roles We Provide

Offshore Installation Managers
Production Superintendents
Production Control Room Operators
Production Operators
Maintenance Supervisors
Offshore Electrical Technicians
Instrument Technicians
Cargo Supervisors
Laboratory Technicians
HSE Officers
Mechanical Technicians
Marine Superintendents
Crane Operators
Able Seamen
Maintenance Superintendents
Purchasing Officers
Contract and Procurement Engineers
Logistics Officers

AGR advantage

AGR supports FPSO operations with personnel suited to integrated production environments where continuity, responsiveness and safe execution are fundamental. The emphasis is on professionals who can contribute across interdependent offshore functions while supporting reliable long-cycle asset performance.

Production support

Support across senior marine positions responsible for navigation, vessel discipline and operational oversight offshore.

Marine coordination

Integrated support across vessel-linked functions within floating production settings.

Maintenance activity

Technical support for routine upkeep, system reliability and offshore continuity.

Asset integrity

Stable input across long-term performance, inspection support and offshore reliability.

Other Sectors We Serve
