

SURVEY & INSPECTION

Technical clarity for offshore decision-making

Survey and inspection functions provide the data, verification and integrity support required to guide offshore activity with confidence. From field measurement and reporting to inspection-led condition review, these roles underpin technical assurance and reliable operational judgement offshore.

Roles We Provide

CSWIP 3.2U Welders
CSWIP 3.4U Inspection Coordinators
CSWIP 3.4U Inspection Engineers
Data Processors
Geophysicists
LBL Surveyors
Senior Data Processors
Senior Surveyors
Senior Survey Technicians
Client Representatives
Party Chiefs
Surveyors
Survey Engineers
Geotechnical Engineers
Geotechnical Operators

AGR advantage

AGR supports survey and inspection requirements with personnel suited to technically controlled environments where reporting quality, data reliability and consistent outputs matter. Our approach focuses on professionals who can support verification-led offshore activity while maintaining technical accuracy and disciplined field delivery.

Survey control

Accurate support across offshore positioning, measurement and field-based survey activity.

Data handling

Dependable processing, recording and reporting across survey and inspection activity.

Inspection support

Technical verification across offshore scopes where condition review is essential.

Integrity support

Technical input that strengthens confidence in asset condition and offshore assurance.
