

TRENCHING & PLOUGHING

Specialist support for seabed operations

Trenching and plough activity depends on precise coordination across cable support, equipment performance and subsea execution offshore. These scopes require personnel who can operate within specialist support environments where timing, control and technical consistency directly influence offshore delivery.

Roles We Provide

Cable Engineer Modus
Cable Jointers
Cable Operators
Cable Testers
Carousel Technicians
Equipment Engineers
Equipment Supervisors
Equipment Technicians
Hydraulic Equipment Technicians
Jointing & Testing Supervisors
Senior Equipment Technicians
Terminators Foremen
Trenching Engineers

AGR advantage

AGR supports trenching and plough requirements with personnel suited to equipment-led operations where seabed activity, cable support and specialist offshore execution must remain closely aligned. The focus is on professionals who can contribute to operational consistency across technically focused subsea environments.

Trenching activity

Controlled support across specialist seabed intervention and offshore burial scopes.

Equipment support

Stable performance across specialist spread systems and technically led offshore activity.

Cable scopes

Technical support across cable-led operations, handling activity and offshore execution.

Testing and jointing

Support across cable preparation, connection and controlled operational delivery.

Other Sectors We Serve
