

WELL OPERATIONS

Control and consistency in live well environments

Well operations require disciplined execution across completions, integrity, testing and wireline-related activity, where technical precision and procedural control are essential. These roles support safe execution across live well environments and contribute directly to continuity, reliability and offshore operational stability.

Roles We Provide

Completion Engineers
Project Engineers
Reservoir Engineers
Senior Completions Engineers
Senior Well Engineers
Senior Well Integrity Engineers
Well Engineers
Well Head Supervisors
Well Integrity Engineers
Well Operations Managers
Well Site Supervisors
Well Test Supervisors
Wireline / Sickline Operators
Wireline / Sickline Supervisors
Survey Client Representatives
Survey Engineers
Survey Technicians

AGR advantage

AGR supports well operations requirements with personnel suited to technically sensitive environments where control, consistency and reliable field contribution are fundamental. Our approach focuses on professionals who can support well-related activity with the discipline and technical grounding required offshore.

Completions support

Controlled input across completion-related activity and technically managed well scopes.

Testing scopes

Reliable contribution across well testing activity where execution discipline matters.

Well integrity

Technical support across integrity-led operations and offshore well oversight.

Wireline services

Support across wireline and slickline-related offshore well operations.

Other Sectors We Serve
